

METHOD AND CODE MODULE FOR ADDING FUNCTION TO A WEB PAGE

ABSTRACT OF THE DISCLOSURE

5 A computer network (20) includes a first processor (22) for  
maintaining a Web page (34) having an embedded first code  
module (36) and accessible through a Web address (38). A  
second processor (24) supports a Web browser (52) for  
downloading the Web page (34) and executing the first code  
module (36). When executed, the first code module (36) issues  
10 a first command (93) to retrieve a second code module (90) from  
a server system (26). The server system (26) includes a  
database (68) having a service response (162, 176, 186)  
associated with the Web address (38). A processor (62)  
assembles the second code module (90) having the service  
15 response (162, 176, 186). When the second code module is  
retrieved, the first code module (36) issues a second command  
(106) to initiate execution of the second code module (90) to  
provide added function to the Web page (34).
